Update

The Story Gets Better and Better

SOKOMAN
MINERALS CORP.

- Sokoman – SIC on TSX-V, SICNF in the U.S
- Share price at \$.45 – a 35% price discount from a few months ago
- Current drill program at Moosehead continues to hit high grade gold with continuity – additional assays pending
- Newly established jv with Benton Resources on three exciting Newfoundland projects an added bonus – assays pending on visible gold samples
- Summer doldrums winding down and gold sentiment at major lows marks the bottom – gold price now moving higher

As most seasoned resource investors know the period since the end of May has been one of the worst on record for the junior gold explorers with many company share prices off 50% or more. Sokoman is down 35% from their recent highs. Sentiment in the sector is at extreme low levels which often marks the bottom.

The US Federal Reserve met this past week and issued a rather dovish report which helped gold regain its footing and drove the USD lower. As we begin to enter a more favorable seasonal period for gold and the gold stocks Sokoman is perfectly positioned to resume its march higher with its phase 6 drill program at Moosehead in full swing and its new and very exciting jv with Benton Resources. Assays are pending from both projects.

Sokoman is over 22,000 meters into their 50,000 meter phase 6 drill program at their flagship Fosterville-style Moosehead project in Newfoundland. Two drills are currently turning and a third is expected in a few weeks that will be barge-based to take advantage of the better angles to attack the footwall splay and as much of the Eastern trend that can be accessed. As a reminder, high grade gold over significant widths have already been tabled during this phase including:

MH-21-115 (Footwall splay-Eastern trend) -- 4.60 m at 47.20 g/t Au; and 8.10 m at 68.25 g/t Au;

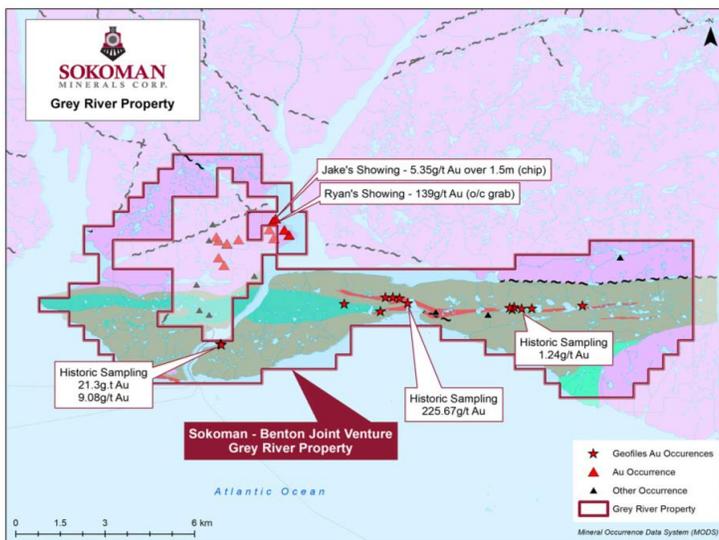

MH-21-163 (Footwall splay-Eastern trend) -- 18.90 m at 13.09 g/t Au;

MH-21-141 (South Pond zone 1) -- 4.20 m at 64 g/t Au;

MH-21-123 (South Pond zone 1) -- five m at 26.87 g/t Au.

As President Tim Froude noted in this past week's press release, "With high-grade gold existing in all known zones within an area at least 700 m in strike, up to 200 m in width and at least 250 m vertical, the potential to link these zones as well as expand the footprint of the Moosehead system is high."

Newfoundland continues to be the hottest area play in the world right now for gold junior exploration companies. Sokoman was at the forefront in Newfoundland before it was “cool” to be a player and has established itself as one of the “go-to” plays for 2021 and beyond. Companies continue to stake ground all over the province but Sokoman and their new jv partner Benton Resources may have just secured what could be one of the most exciting grass roots projects in Newfoundland this year.

Sokoman's new Grey River gold project has all of the same geochemical signatures of the large scale Pogo gold mine in Alaska which up through 2019 had produced 3.9 million oz gold at 13.6 g/t gold, with reserves of over 7 million oz gold. A historical grab sample from Grey River assayed 225 g/t gold. President Tim Froude put boots on the ground over the past month and additional sampling

assays are forthcoming. Aeromagnetic surveys are being flown over all 3 projects (Grey River, Golden Hope and Kepenkeck) and a drill program is being targeted for September at the most prospective targets.

They say a picture is worth a thousand words. Take a look at this picture at Grey River showing a quartz zone up to 200 meters wide and going on for kilometers. A discovery awaits!

What to Expect Next:

Assays will continue to be released throughout the second half of the year at Moosehead as over 28,000 more meters of drilling is scheduled. Assays from sampling at the Sokoman-Benton JV projects are also on deck and visible gold has already been noted in new samples taken.

Gold has FINALLY broken out to the upside and with it sentiment will begin to improve in the sector. Sokoman's share price is currently on sale at a 35% discount from prior highs. The sale may not last much longer.
