SOKOMAN
MINERALS CORP.

March has been an extremely busy month for Tim and the team at Sokoman.

In early March the Sokoman-Benton JV announced a maiden gold discovery at their Grey River project in Newfoundland. This initial scout drill program consisted of 5 holes over 5 kilometers and gold was present in each of the holes showing an extensive gold system target. Hole #1, the farthest east, hit gold in 3 distinct zones less than 100 meters from surface including 10.58 g/t gold over 1.8 meters. The gold is open in all directions. The JV is permitting a summer drill program for 25-30 holes to follow-up on this exciting, new discovery.

A few days later management closed a \$5 million private placement with \$4 million being taken up by long-term supporter Eric Sprott. With the closing of this placement Eric now owns 28.2% of the company on a non-diluted basis and 34.3% on a partially-diluted basis.

Finally this past week the Sokoman-Benton JV announced a new lithium discovery at the Kraken pegmatite field at their Golden Hope project in southwest Newfoundland.

A total of 6 holes were drilled in an area shown above on the map. Assays from the first hole were released and included 8.4 meters of .95% Li₂O with grades as high as 1.76% Li₂O. Gold analysis for this hole is pending as well as Li₂O assays from holes 2 through 6. A short video of this discovery hole can be viewed at <https://www.youtube.com/watch?v=Ka9ZFS4Jvws&t=16s>. The Kraken pegmatite field has been sampled over a strike length of 2,200 meters and an apparent width of 1,200 meters, and historical assessment work reports pegmatite dikes exposed up to 6 kilometers along trend.

Next up are assays from the flagship Moosehead high-grade gold project.

News flow will be strong throughout the spring and summer months.
